

Year 7 Careers PD Session

Our Year 7 Careers PD session was nothing short of inspirational, thanks to two outstanding outside speakers who truly captured students' imaginations. Robert's presentation was brilliant from the very start. By sharing his initial own uncertainty about his future, he reassured students that it's completely normal not to have everything figured out yet. His possible journey through computer science into industries as diverse as banking, engineering, and even sugar manufacturing opened students' eyes to the power and flexibility of digital skills. His explanation of how banks make money sparked real curiosity and thoughtful discussion.

Fiona's talk was equally powerful. From a first-class Geography degree to roles at Deloitte, Unilever, government, and now the Office for National Statistics, her career story showed that pathways are rarely straight lines. Students were fascinated by exploring real data, especially the name popularity activity. The session left Year 7 inspired, motivated, and excited about future possibilities.
